### ***DETAILED ACTION***

Claims 1-9 are currently pending in the instant application.

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3 and 8, are drawn to a process of preparing compound of Formula I, depicted in claim 1, classified in class 544.
  - II. Claims 4-7 and 9, are drawn to methods of preparing compound of the formula II, classified in class 544

The above groups represent general areas wherein the inventions are independent and distinct, each from the other because of the following reasons:

Invention Groups I and II are directed to distinct processes of making distinct products. Each requires different reagents and reaction conditions. Each group can support its own patent, as each group is capable of being utilized alone and not in combination with other groups.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

In response to restriction requirement applicant's attorney Mr. Thomas M. Galgano, has elected without traverse the Invention of Group I, claims 1-3 and 8.

### ***Examiners Amendment***

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

Art Unit: 1626

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas M. Galgano, on 7 November 2005.

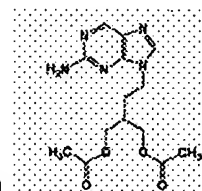

2. The application has been amended as follows:

**Delete** non-elected claims 4-7 and 9.

***Reasons for Allowance***

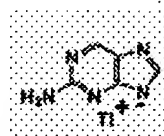

The following is an examiner's statement of reasons for allowance:

Applicants claim a process of preparing compounds of Formula

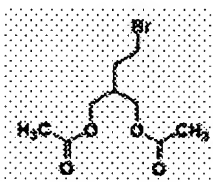

The

process comprises the reaction of thallium salt of Formula

with compound of

Formula. The closest prior art of the record is to Geen et al, US Patent No.

5,684,153. The process described in this application differ from the prior art in that thallium salt is used in the reaction which resulted in the formation of the desired product. The prior art process resulted in the formation of mixtures that included non-desired by-products. The prior art neither teach nor suggest the process claimed in this application.
